Ford released awesome news for this year. The news consists of the all new Boss 302, this engine will be a lot tougher for the after market crowd and will have the capabilities of producing more horsepower than the past. The old engines produced just under 300hp, now the boss engines are producing around 500hp with no problem. Most remember the 5.0 in the foxbody, a memorable legend. Now with an affordable price of \$1,759, just about anyone can bring a foxbody back from the dead. This is definately what Ford fans have been waiting for!

- 4-bolt mains for lower-end stability at high power outputs
- High-tin 41,000 PSI tensile strength iron alloy for ultimate strength
- Nodular iron main caps for additional strength
- Screw-in freeze plugs for additional more strength and stability
- Front cross-over lifter oiling for high RPM valvetrain capability
- Siamese bores with specifically engineered drillings between cylinders for maximum wall stability and gasket sealing with street capable cooling performance

The more serious Boss engines will be ranging from \$4,650 to \$10,000(Boss 331cid). The engines come with a 12 month/12,000 mile limited warranty.
